# Pre-requistes: Fundamentals of Computer, Digital Logic Circuits, Programming Languages (C, C++, Java)

# **Course Educational Objectives (CEO):**

CEO 1	To conceptualize the basics of organizational and architectural issues of a digital computer.
CEO 2	To analyze performance issues in processor and memory design of a digital computer.
CEO 3	To understand various data transfer techniques in digital computer.
CEO 4	To analyze processor performance improvement using instruction level parallelism

## **Course Learning Outcomes:**

A	Ability to understand basic structure of computer.
В	Ability to perform computer arithmetic operations.
C	Ability to understand control unit operations.
D	Ability to design memory organization that uses banks for different word size operations.
E	Ability to understand the concept of cache mapping techniques.
F	Ability to understand the concept of I/O organization.
G	Ability to conceptualize instruction level parallelism.

# **Detail Syllabus:**

Module	<b>Detailed Contents</b>	Hours
1	Overview of Computer Architecture & Organization: Introduction of Computer Organization and Architecture. Basic organization of computer and block level description of the functional units. Evolution of Computers, Von Neumann model. Performance measure of Computer Architecture. Introduction to buses and connecting I/O devices to CPU and Memory, bus structure.	04
2	Data Representation and Arithmetic Algorithms:  Number representation: Binary Data representation, two's complement representation and Floating-point representation. IEEE 754 floating point number representation. Integer Data computation: Addition, Subtraction. Multiplication: Signed multiplication, Booth's algorithm. Division of integers: Restoring and non-restoring division Floating point arithmetic: Addition, subtraction	10
3	Processor Organization and Architecture:  CPU Architecture, Register Organization, Instruction formats, basic instruction cycle. Instruction interpretation and sequencing.  Control Unit: Soft wired (Micro-programmed) and hardwired control unit design methods. Microinstruction sequencing and execution. Micro operations, concepts of nano programming. Introduction to RISC and CISC architectures and design issues. Case study on 8085 microprocessor: Features, architecture, pin configuration and addressing modes.	12
4	Memory Organization: Introduction to Memory and Memory parameters. Classifications of primary and secondary memories. Types of RAM and ROM, Allocation policies, Memory hierarchy and characteristics. Cache memory: Concept, architecture (L1, L2, L3), mapping techniques. Cache Coherency, Interleaved and Associative memory. Virtual Memory: Concept, Segmentation and Paging, Page replacement policies.	12
5	I/O Organization and Peripherals: Input/output systems, I/O modules and 8089 IO processor. Types of data transfer techniques: Programmed I/O, Interrupt driven I/O and DMA. Peripheral Devices: Introduction to peripheral devices, scanner, plotter, joysticks, touch pad.	6
6	Introduction to parallel processing systems: Introduction to parallel processing concepts, Flynn's classifications, pipeline processing, instruction pipelining, pipeline stages, pipeline hazards.	4

#### **Text Books:**

- 1. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, "Computer Organization", Fifth Edition, Tata McGraw-Hill.
- 2. John P. Hayes, "Computer Architecture and Organization", Third Edition.
- 3. William Stallings, "Computer Organization and Architecture: Designing for Performance", Eighth Edition, Pearson.
- 4. B. Govindarajulu, "Computer Architecture and Organization: Design Principles and Applications", Second Edition, Tata McGraw-Hill.

### **Reference Books:**

- 1. Dr. M. Usha, T. S. Srikanth, "Computer System Architecture and Organization", First Edition, Wiley-India.
- 2. "Computer Organization" by ISRD Group, Tata McGraw-Hill.
- 3. Ramesh Gaonkar, "Microprocessor Architecture, Programming and Applications with the 8085, Fifth Edition, Penram.

## Oral examination will be based on the above syllabus.

There will be at least two assignments covering the above syllabus. Journal must include at least 2 assignments.

**Term Work**: 25 Marks (Total marks) = 15 Marks (Experiment and Case Studies) + 5 Marks (Assignments) + 5 Marks (Attendance)

**Note:** The faculty should conduct eight programming practical / experiments based on the above syllabus including two case studies on recent developments covering the above contents.

All the programs should be implemented in C/C++/Java under Windows or Linux environment. Experiments can also be conducted using available open source tools.

8085 microprocessor should be included only as a sample case study. No questions in University Exams / Class Tests should be asked on 8085 microprocessor.

## SUGGESTED LIST OF COA PRACTICAL / EXPERIMENTS:

- 1. To study Full Adder (7483).
- 2. To study ALU (74181).
- 3. To study MASM (Micro Assembler).
- 4. A program for hexadecimal addition and multiplication.
- 5. A program for binary multiplication.
- 6. A program for Hamming code generation, detection and correction.
- 7. A program for Booth's multiplication
- 8. A program for LRU page replacement algorithm.
- 9. A program for FIFO page replacement algorithm.
- 10. A program to simulate the mapping techniques of Cache memory.

- 10.1 Direct Mapped cache
- 10.2 Associative Mapped cache
- 10.3 Set Associative Mapped cache
- 11. A program to simulate memory allocation policies.
  - 11.1 First-fit algorithm
  - 11.2 Best-fit algorithm
- 12. A program to implement serial communication (PC PC communication).
- 13. A program to implement parallel communication. (PC Printer communication).
- 14. A program for printer simulation.
- 15. A program for keyboard simulation.

## **Theory Examination:**

- Question paper will comprise of 6 questions, each carrying 20 marks.
- Total 4 questions need to be solved.
- Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 3 marks will be asked.
- Remaining question will be randomly selected from all the modules.

Weightage of marks should be proportional to number of hours assigned to each module.
